

HEALT AND SAFETY IN THE WORKPLACE

In the Legislative Decree n°81 dated 9th April 2008, "Consolidated Law on Health and Safety protection of employees in the workplace", known also as TUSL, the Title II dedicated to workplaces says:

The employer must assure that:

- Workplaces, plants and devices are subject to a regular technical maintenance and any defect that could compromise safety and health of the employees is eliminated as fast as possible;
- Workplaces, plants and devices are subject to a regular cleaning, in order to provide adequate hygienic conditions;
- Safety systems and devices, used to prevent and eliminate dangers, are subject to a regular maintenance and to a checking of their correct working.

Moreover, Annex IV: "Workplaces conditions" in the paragraph 1.3.2 requires that: **"The room floors must be fixed, stable and slip-resistant, as well as free from any protuberance, cavity or dangerous sloping surface"**.

Sterilsorb, the AIRBANK product made of absorbing granules, is a remedy to the spill of any type of substance, avoiding the danger of slipping and guaranteeing a safe, clean and hygienic workplace. Moreover, being totally biodegradable, neutral and without particular additives that could alter its characteristics, it is ideal for the use in food industries and hospitals, because it cleans without any contamination of products and rooms with undesired and dangerous chemicals.

In the CE n°852/2004 HACCP Regulation it is repeatedly indicated to adopt adequate measures to keep cleaned all rooms and plants used for the primary production and associated operations. Even in this case, Sterilsorb can absorb the spillings and help to keep the floors of delicate areas clean with a 100% biodegradable natural product of vegetal origin.
