

**SPILLS EMERGENCY
HERE ARE THE INSTRUMENTS TO INTERVENE IN A TIMELY MANNER**

To ensure a rapid response in case of spills of dangerous and polluting substances, Airbank, a leading company in the field of pollution prevention and environmental safety, introduces signs and stickers to inform operators where to recover the rapid response kit in case of emergency and to indicate areas where there is a greater risk of accidental spills.

How to intervene in case of **spills and accidental losses of dangerous and polluting substances**? It is necessary not only to have the right products available but also **to act immediately**, so as to nip the problem in the bud and avoid worse problems (eg pollution of the surrounding environment or production interruption).

For this reason, **signs and stickers get to the market to be used both to highlight a danger**, where there are higher or possible risks of spills, and to signal to the operator – in charge and not - **where to recover the anti-spill kit** to intervene in the fastest way.

These products are presented by **Airbank**, the leading company in the field of pollution prevention and environmental safety based in Emilia Romagna, that realizes **Rapid Response Anti-spills Kits**, containing absorbent material, such as cloths and sausages combined with powders, able to recover and block the spilled substance, suitable containers/bags for waste disposal, PPE and sometimes detergent liquids to restore the area.

| COLORE | KIT |
|---|------------------|
|  | OIL ONLY |
|  | UNIVERSAL |
|  | CHEM |
|  | SPECIAL |

The warning sign **“Anti-spill Kit”**, designed by Airbank, is essential to indicate the location of the kit within the company so as to allow the operator to identify it quickly and then to intervene promptly. “The timely action in the event of spills certainly derives from previous training, but also from the rapid identification of the necessary material inside the workplace”, explains **Gloria Mazzoni, General Manager of Airbank**. “It is therefore essential not only to position the kits in areas that are clearly visible and easily accessible when an emergency situation occurs, but also to **adequately signal the location of the absorbent material**”. The sign, to be placed on the wall / shelf location of the kit, must be positioned so as to make it visible even from afar, while a second sticker, bearing the same signal, is already positioned on the container of the kit.

With the containment product (eg containment tanks, containers for the storage of chemical substances, etc ...) the **new “Spills Danger” warning sign created by Airbank** will be also supplied: if correctly positioned so as to make it visible even from afar, it allows operators to identify the areas of the working environment **where there could be a danger of spill of chemical substances**, hazardous in the liquid state. In this way, workers are alerted to the risk deriving from the possible presence of slippery floors and, above all, are warned to pay attention during handling and storage of containers of substances in the liquid state such as drums, tanks, etc...

A second sticker, bearing the same danger signal, is already positioned on the Airbank containment product.
